DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Ambrosch et al (US. 4,273,510).

Ambrosch discloses an apparatus for restricting axial flow through the clearance between a rotating shaft and a seal stator and providing effective damping to improve rotor stability (intended use), the apparatus having an abradable labyrinth seal (seal formed by on of three members 5) and swirl-reversal vanes (vanes formed by 6a) upstream of the labyrinth seal.

Regarding claim 2: The shaft comprises a first toothed axial section having a plurality of annular teeth (teeth on shaft 3), a second upstream toothed axial section having a few annular teeth from one to three (two of members 5) and a section therebetween having a cylindrical surface of diameter less than the outer edge of the teeth of the toothed sections (figure 4, where 6a is placed between the two members 5), the swirl-reversing vanes being fastened to the stator seal between the toothed sections.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hagi et al 4. (US. 5,967,746) in view of Ambrosch et al (US. 4,273,510).

Hagi teaches an apparatus for restricting axial flow through the clearance between a rotating shaft and a seal stator and providing effective damping to improve rotor stability having an abradable labyrinth seal (seal formed by 2), the shaft comprises a first toothed axial section having a plurality of annular teeth (first section having the longest tooth), a second upstream toothed axial section having a few annular teeth from one to three (the teeth that are shorter than the longest teeth) and a section therebetween having a cylindrical surface of diameter less than the outer edge of the toothed section (diameter between two of the teeth). There is a smooth abradable coating on surface of the stator seal radially outward of the first toothed section (the abradable seal extends along the first and second toothed sections). Hagi teaches the invention substantially as claimed above but fails to teach that swirl-reversing vanes being fastened to the stator seal between the toothed section, the vanes having a v-shape that has a arc or a tapered ends. Ambrosch teaches to have seal sections (5), swirl-reversing vanes fastened to the stator seal, the vanes are in the seal section that lies on the stator (2) and the vanes are taught to be have arc or tapered ends (figure 7). It would have been obvious to one having ordinary skill in the art at the time the invention was made to configure the stator of Hagi to have swirl-reversing vanes as taught by Ambrosch, to provide reduction of oscillation of the shaft and to reduce forces that cause oscillation (column 4, lines 54-62 of Ambrosch).

Art Unit: 3673

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Naljotov et al, Kobayashi et al, Bradley et al and Burnett et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vishal Patel whose telephone number is 571-272-7060. The examiner can normally be reached on 6:30am to 8:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patricia L. Engle can be reached on 571-272-6660. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
